
Lumache

Release 0.1

Graziella

May 27, 2023

CONTENTS

1	Contents	3
1.1	Usage	3
1.2	API	3

Cereus Linux is a Void Linux based distribution that focuses in delivering a user-friendly experience and extra repositories. It currently supports three architectures: x86_64, x86_64-musl and i686.

It uses the [Calamares](#) project to provide a graphical installer and a TUI installer forked from void-installer (from [void-mklive](#)).

Currently, we provide 3 editions: LXQt, XFCE and Base. We plan to also provide KDE Plasma and Cinnamon editions.

Check out the [Usage](#) section for further information, including how to [Installation](#) the project.

Note: This project is under active development.

CONTENTS

1.1 Usage

1.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

1.2 API
